

The Automatic Horse Feeder

**Revolutionize the way you
feed your horse**

iFEED

A revolutionary way to feed your horse

We all know how important our equine friends are to us. One of the strongest natural instincts of the horse is to graze. This is why we at iFEED have designed a way to mimic grazing when feeding your horse.

Feeding your horse many small meals a day, can help eliminate many of the digestive disorders found in horses today, such as colic, choke and ulcers. Smaller meals make it easier for the horse to digest the food properly ensuring proper nutritional uptake.

Horses often become anxious or stressed if there are long periods of time between meals. If given the choice, a horse will rarely go more than 2-3 hours between meals.

By attending to your horse's need for regular, consistent small meals with the iFEED automatic horse feeder, you also help eliminate many of the stall vices that come from stress and anxiety and eliminate undesirable eating habits. Let iFEED help you and your horse live long and happy lives together.

It is not only what you feed – but how you feed!

Saves you time and money

- iFEED allows you to feed when it is best for you and your horse
- Improves nutritional uptake
- Reduction in digestive disorders such as colic and ulcers which results in savings on your vet expenses
- Reduction in labor
- Average savings in feed 20-30%

Safe for you and your horse

- Low 24 volt voltage. Creates a safe environment for humans and animals
- Made from safe and durable food grade polypropylene and stainless steel with smooth edges
- Power is on only while feed is being dispensed
- iFEED is mounted inside or outside the stall

Features

- Dimensions: 21"x10"x7" (h,w,d). Weight: approx. 4 lbs
- One power supply operates from 1 to 80 feeders
- Set timer to schedule multiple feedings (up to 48) in 24 hours
- Select 1-15 portions per feeding
- Holds up to 12 lbs of feed
